Trans. , 1916, ii, 649 Acetylene may be estimated by the red color produced in ammoniacal cuprous solutions, containing a little gelatine. In a gaseous mixture, as little as 0.001 cc. of acetylene can be detected. Characteristic Reactions of Perchlorates, Periodates, Per-A. Monnier sulphates, Percarbonates and Perborates Chem. Abst. , 1917, p. 426 Precision in Chemical Weighing W. N. Rae and J. Reilly Chem. News, 1916, pp. 187, 200 Colloid Chemistry The Effect of Centrifugal Force on Colloidal E. E. Ayres Solutions Met. Chem. Eng. , 1917, p. 190 The author first reviews the work of Perrin and others on the distribution of colloid or suspended particles in a liquid under a uniform force, e. g. , gravitation, which gives a law expressing the subsidence (or separation) as a function of the particle size and density. Perrin's distribution formula is then applied to separation of suspended particles by centrifugal force, and an analogous expression obtained in which the gravitation! modulus mgk , where k is a constant equal to Avogadro constant divided by RT (R gas const, T abs. temp.), g gravitational constant, m mass volume times absolute density, is replaced by a centrifugal modulus l $m\omega^2 r$, where the symbols retain their meaning but ω revolutions per minute. It is shown that separation is good when b 10 and practically perfect when b 100. A further calculation is given...
