RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 52 pages. Original publisher: Cincinnati, OH : U. S. Environmental Protection Agency, Office of Research and Development, National Risk Management Research Laboratory, 2002 OCLC Number: (OCoLC)52632413 Subject: Risk management -- United States. Excerpt: . . . RiskChap3. qxd 2 6 2003 12: 31 PM Page 6 3. 3. 1 WHAT ARE ENVIRONMENTAL INDEXES Indexing is a data interpretation tool that involves expressing one or more quantitative measurements as part of a scale - for instance, a scale ranging from poor to excellent. An environmental index might range, for example, from 0 (representing low risk of exposure) to 100 (representing a high exposure risk). Or, instead of a health risk, one or more environmental conditions might be represented (e. g. , dissolved oxygen levels as one indication of water quality). The development of an index often also involves establishing weighting factors (i. e. , giving the more important variables more weight than less important variables) as well as an equation for combining all the relevant data values into the index scale. When you develop or use indexes, related color-coding schemes or other data visualization and data interpretation tools, you will often need to decide where good (or low risk) ends and poor (or high risk) begins, as well as how additional intermediate ranges are to be determined. These key junctures are cutoff points that identify the important data ranges in the overall index scheme. In the context of environmental risk communication, basing cutoff points and ranges on scientific information is recommended whenever possible so that the index reflects actual risk levels (as is the case for many of the indexes discussed as examples...
