Dimensions: 9.0in. x 6.0in. x 0.1in.The Department of Defense (DOD) is quickly reaching an information technology (IT) crossroad; its choices will determine whether it achieves decisional superiority or becomes paralyzed and drowns in its own data. Information management technologies and practices currently used to exploit the exponentially growing volumes of data are rapidly becoming inadequate. For instance, a battalion intelligence analyst requires time-critical information spread across 200 different networks in 20 different languages. Upon uncovering a bad lot of batteries, a satellite program manager must survey 15 different contracts as-designed and as-built lists to ensure none of the faulty batteries are used. A deployed commander cannot write his or her subordinates promotion recommendation forms because the local area network does not host the requisite forms viewer software. A Marine platoon commanders intelligence requirements change as he moves from stateside training, to forward base operations, to patrol. These users must access and manipulate unstructured data, obtain and share contextually relevant information, and operate from and across dissimilar IT systems. Effective information management capabilities are a critical requirement, not a luxury. In their testimony to the Senate Committee on Homeland Security and Governmental Affairs, representatives of the Government Accountability Office (GAO) stated that the ability to find, organize, use, share, appropriately dispose of, and save recordsthe essence of records managementis vital for the effective functioning of the federal government. Beyond meeting basic information management capabilities, the DOD requires the ability to simultaneously and remotely share maps, imagery, and video among commanders at all echelons across mounted or dismounted ground terminals and airborne and seaborne assets to support decision making. The DODs underlying problem is the inability to collect, gather, organize, exploit, share, and store data that comes from...
